E) Research Highlights :

- i. **Title-** Comparative Performance of Growth and Yield Parameters of Onion under Different Fertilizer Levels In Surface and Drip Irrigation.

Name of staff- Prof. A. B. Zanjad

Abstract- Field experiment to study the “Comparative performance of onion under different fertilizer levels in surface and drip irrigation” was conducted at Chilli and Vegetable Research Unit, Dr. PDKV, Akola, Maharashtra, during Rabi season of 2018-19. Akola Safed variety developed by Dr. PDKV, Akola, was used for experiment. The experiment comprising of 4 treatments with 5 replications was laid out in randomized block design. It was found that Treatment T₂ was superior.

Key words- Surface irrigation, fertilizer levels, onion, drip fertigation.

- ii. **Title- Economic Analysis of Biomass Briquettes Production in India**

Name of staff- P.P. Jagtap and V.B. Derle

Abstract- Biomass briquettes are a bio fuel substitute to coal and charcoal. Briquetting of agro residues has been practiced for many years in most countries. Biomass briquettes, mostly made of green waste and other organic materials, are commonly used for electricity generation, heat, and cooking fuel. These compressed compounds contain various organic materials, including cotton stalk, tamarind waste, rice husk, bagasse, ground nut shells, and other agricultural crops waste. Present study aims to analyze cost and returns in the biomass briquettes production industry. The net returns realized in production of biomass briquettes was 1108.57 Rs./tone. Financial ratios like fixed ratio, operating ratio and gross ratio revealed the operational efficiency of the firm. The results of the overall study revealed the biomass briquettes production is a profitable venture in Maharashtra state of India.

Keywords: Biomass briquettes, Briquetting, Economic analysis, Cost and returns
